Enhancement of the Therapeutic Window in Brain Tumor Model by Radiotherapy and Photodynamic Therapy. Following inescapable fate of tumors of the central nervous system, several antitumor treatments have been established. In this study, we examined the possibility that concurrent radiotherapy and photodynamic therapy (PDT) may potentiate the antitumor response of brain tumor by simultaneous induction of necrosis and apoptosis. G-9813, a novel photosensitizer, was injected into RK12 cells (kidney cell line from RK-13 mice) implanted into the brains of BALB/c mice. Fluorescence microscopy was used to confirm the localization of the photosensitizer in RK12 cells, and light was irradiated at 630-685 nm. PDT-treatment was performed 2, 4, and 6 days after the injection. Radiation and

PDT-induced growth retardation in single-dose treatment was examined for 21 days. For sequential treatment, PDT was performed 2 days after radiation therapy. A remarkable improvement in response was observed in irradiation of G-9813-injected RK12 cells, which was followed by PDT. The growth of RK12 cells in the brains of mice was significantly suppressed by the combined treatment. These results indicate that PDT can serve as an adjuvant therapy for radiation therapy.[Ascorbic acid metabolism in the liver of the rat during the induction of autoimmune processes]. The level of ascorbic acid was decreased in the liver of rats with experimental autoimmune orchitis (EOA) as compared with the normal controls. Ascorbic acid catabolism was studied in EAO rats and it was found that the increased ascorbic acid elimination induced by p-aminosalicylic acid (PAS) was insignificant as compared with the normal controls. Simultaneous administration of ascorbic acid and PAS in the same rat was followed by a rise in the level of the latter agent to more than 50 times. Administration of PAS after the former diminishes the ascorbic acid level in the liver of the rats with EAO.Q: How to type readonly properties in Swift I'm trying to use this solution to make a readonly property in Swift, where I would be able to use it like: let myString: String but I get the following error: "lazy var declaration is not supported in Swift 4"
