What's new in Insane Town:

Hidden Shapes Animals Game Preview What are you going to be doing until you get the game? Its new biomes are now in the world! Use them to create a new gamemode without any animals of sorts. They have been added to the Cheetah's set too. Meet the new submodes! You can create different biomes to discover new biomes and soil types! You can even create square, diamond and octahedron shaped biomes! Have fun experimenting by making some of our wiki articles! You can make a wiki page to ask questions, make notes, or even add the genetic material you're studying into the DNA editor. Visit our new GUI to create all sorts of things! You can make a 2D website, a website full of 3D ads, an ad for a 2D website, an ad for an ad for a website, etc. You can also edit everything just from the GUI's menus without needing to go to find the files. Have fun talking! You can send clones to other players, which will send a message to them. You can also send real-time messages and animations. Oh, and feel free to send messages when you die, it only costs a few skins. You can use a particle wall. See that lovely texture? That's not a rope that just happens to have the texture of a rope. That's the texture of a rope that maybe has a texture made by a designer thinking that sticks look kinda nice and would fit the biome. That designer has a name, and they like putting their names on the things they made. This tool also allows you to make unique textures if you want. How come there's no right click menu?!?! The game is 90% as good as it could be? This option should be on the right-click menu. Why aren't there any options?!?! Well, it was all written by one friend of mine who was really adamant about not putting right click menu options on there. Pretty much 30% of the code changes he made were just code that would do what different options would do, along with the code that adds an option. He thought that was a reasonable compromise. Let me know if you think he was wrong. What's new in v0.2? :3 1) New update. 2) New Biosets. 3) New biodiversity calculator. 4) New biomes. 5) New gui. 6)

Each standalone DLC offer 4 new playable characters, a gear set, a new skill tree and the new trailer. The main character in "The Descent of Erdrick" is Corin, a young knight who has lost his father during the War. He also lost his right hand and his reason to live. The war is over now and he has arrived in the frontier lands with no other goal than the simple desire to find a new life and find out why he was picked to die as his father. Wounded and lost, Corin must survive on the fringes of society, with only his desire for revenge as an ally. Corin has been given a gift by the goddess Araby, a very powerful sword. The sword might offer him something more than vengeance, as it carries the power to perform miracles. Corin will find that there is more to the world than a simple lesson of revenge, and he must make a decision about who he really is in the face of new choices. "Fireborn" is the story of two young friends, whose fate is intertwined with the legendary gift of the goddess Araby. Mattias and Helen are two brothers, you can probably call them lonesome souls, but that is just something that have happened to them. Both brothers are now led by the Seer of the wolf clan, and the Seer instructs them to find an artifact called "Heart of the World". The artifact's true purpose will only become clear when Mattias and Helen enter the heart of the mythical city of Norway
