programming languages

Q: SQL Case against multiple records I have two tables, both containing a column for the categories of an

item. One of the two tables holds the categories, the other holds all of the items related to a

certain category. Sample Data: Table A

ID	Name	Category
1	Item 1	Food
2	Item 2	Food
3	Item 3	Food
4	Item 4	Beauty
5	Item 5	Beauty

ID	Parent_ID	Code	Category
1	1		Food
2	2	2	Food
3	3	2	Food
4	4		Beauty
5	5		Beauty

ID	Parent_ID	Code	Category
1	1		Food
2	2	2	Food
3	3	2	Food
4	4		Beauty
5	5		Beauty

Item_ID	Parent_ID	Code	Category
1	1		Food
2	2	2	Food
3	3	2	Food
4	4		Beauty
5	5		Beauty

Item_ID	Parent_ID	Code	Category
1	1		Food
2	2	2	Food
3	3	2	Food
4	4		Beauty
5	5		Beauty

Item_ID	Parent_ID	Code	Category
1	1		Food
2	2	2	Food
3	3	2	Food
4	4		Beauty
5	5		Beauty

Item_ID	Parent_ID	Code	Category
1	1		Food
2	2	2	Food
3	3	2	Food
4	4		Beauty
5	5		Beauty

Item_ID	Parent_ID	Code	Category
1	1		Food
2	2	2	Food
3	3	2	Food
4	4		Beauty
5	5		Beauty

cannot figure out how to derive this in SQL.

What I think I have to do is use a case statement that generates a code for each Item_ID in the items table and a category for each item and then compare the category of

every item with every item in the items table,
but I'm
