How I mastered the eBay art of selling your old items. Kathalek a+ bengali movie download Â· Michael Jackson Is Dead | SoundHound 5.11. An epitope mapping study of lipophilin 1 protein in human breast tissue. Lipophilin 1 (LIP1) is a member of the signal regulatory protein-alpha gene family, and is expressed in human mammary epithelial cells. LIP1 is induced in breast cancer cell lines and tumors, but the normal expression of LIP1 in human tissues has not been studied. A monoclonal antibody, 4F4, was raised against LIP1, and used to determine the LIP1 expression in the normal and malignant breast tissues. Both the breast carcinomas and the paired normal tissues were examined for LIP1 expression by immunocytochemistry, and the results were quantified by semiquantitative index. High levels of LIP1 expression were found in the breast tissues of normal individuals. The expression of LIP1 is found to be higher in grade I tumors, and in the normal tissue it was found to be higher than in high-grade tumors. In contrast, there was no correlation between LIP1 expression and estrogen receptor levels in either tumor or normal tissues. These results suggest that LIP1 may be a potential tumor marker for breast cancer. Q: jQuery Clickable image class attribute I have the following lines of code to attach click events to my images. var imgs = \$('img'); imgs.click(function() { ... }); What I would like to do is attach a click event to images that have a particular class attribute. I tried the following, but it doesn't work. var imgs = \$('img.the_class'); imgs.click(function() { ... }); Is it possible to add such a class attribute in jQuery? A: Use this \$('img.the_class').click(function() { //do something }); Your original idea was to look for an attribute called the_class but there is no such attribute on elements. Attribute is looked up on the current item, not ancestor items. So if you want a class on an element you need to use the class selector c6a93da74d
