our innovative approach to structural analysis software development allows us to take advantage of a wealth of rapidly evolving technologies to produce world-class products. nowhere is this approach more evident than in the development of csi robot. designed specifically to be the only ia based structural engineering software, csi robot permits "no-code" definition of static and dynamic modeling solutions within the context of all other disciplines in a single 3d model. csi's unique ability to take advantage of not just geometric modeling but also physics-based performance simulation algorithms to analyze structural performance is, quite simply, unparalleled. once defined, the design intent is updated and applied to all components within the 3d model. static and dynamic analyses are run to ensure that these are valid solutions, and they are tagged for future printing. additionally, all messages between products are also shared via the patented csi3ddynamics mechanism to facilitate full product interoperability. this revolutionary approach to software development means that csi robot is the only software to handle literally every ia, code-based, bim, or bim-native analysis that is available from any of our competitors. after this, you can save autodesk robot structural analysis professional 2022 for later use or you can install it on your own system. if autodesk robot structural analysis professional 2022 is installed and updated, then you will be prompted to restart your system once you login for the first time after you update autodesk robot structural analysis professional 2022 with autodesk revit integration tool.
