Now that we have learned something of Photoshop, let's put it to use using some "After Effects" to make an animation. First, open a new project in After Effects, and please name it something meaningful. Forget using a generic banner with random words. We are going to create a banner for this website: a tiny guy with an umbrella in a beautiful boat. The boat is filled with dancing people in the background---there is a hoop, a ball, a bunch of balloons, and a star in the sky. Since we have the project open and it is named "Sweet Invitation," we will use the Movie Clip feature to take part of this video. In our scene view we want to add the banner. We will first add a text box, which we can manipulate later. We will add a keyframe on the bottom of the text. Preview what we have so far using the Delay key framing. We will leave the end key framing as the final state. Once the text looks good and we have a few keyframes for it, flip the animation to Full Extent so that we can see all the layers. Next, we are going to add the characters into this scene. They will be small, so you may want to play with your viewport size to make them larger. You can see a few of these characters in the gif logo at the top of this page. Whether you're a hardcore Photoshop pro, an aspiring photographer or designer, or somewhere in between, we hope you find this comprehensive guide to all the essential tools in Photoshop helpful and surprisingly easy to follow. Stay tuned for more content on Photoshop in the coming months.
