However, as a general rule, I never use filters for filters... I have done some testing, and most of the time, Lightroom's presets offer an element of the effect I'm looking for. This time, however, I felt the results a bit lackluster. I simply don't notice a difference in photos with and without a filter. However, neither Lightroom CC nor the Brush panel provides access to all list of camera option settings. Lightroom CC users have the option of downloading Adobe DNG Profile for a more flexible, though more slow, way to manage RAWs. I found no current way to save to DNG to the camera directly, though you can change to the profile name in any folder. If you are passionate about JPG, your Lightroom options will likely feature a New Fast Drive option, which defaults to JPG—with no RAW support. However, there is no option to force a new format conversion in the menu. Any time you switch to a different mode, you have to go back manually. Yet another option is that of original format image stock. These will not be converted to another format. However, you can select one or a few images and make them "original format." This means they will be stored as they are originally captured. The original format is stored in the Target folder where the photo is saved. It is not ticked off by default.
