I'm an Lr user since the start and have always been satisfied with it. I'm thinking about the possibility of switching to CS6 to be able to bring more features to Lr but idk if the switch is worth it... Online, I'm using CS6 a lot, I find it very responsive and easy to use, I export Lr files with PDF and JPEGs with no problem. The only issue I have is that my entire flash folders (from screwing around with flash packages and scripts) show up in the Lr catalog, so I have to go into the catalog and remove them every time... (they take up a lot of space anyway), so it's not like they are taking up too much room. The real issue is me losing rippable layers when I reimport, and further need to be copied in collision when they do it automatically, but this I have experience because I'm an idiot and import all my stuff as an individual layout every time. When you activate Photoshop 2020 or 2021, you're prompted to download the automatic update. Adobe Photoshop Features are a collection of tutorial-based chapters with over 400 pages, and covers topics, such as lightroom, brush smoothness, perspective, gradients, selection brushes, and image adjustments to name a few. This book will tell you how to organize the tool palette and how to use them properly. It covers every little thing as well as its application. This book is the companion to 'Photoshop CC tutorial' (a complete guide to Photoshop), and teaches you how to use Photoshop with relative ease. You further get to know about the things that don't get covered in those books and you are provided with different ways to work with Photoshop, of course, for free. If you want to get the most out of your editing potential, you'll need to pay for the Elements apps. Like other Elements products, Photoshop Elements is available in a number of subscriptions plans.
