Download the app and go through a short setup guide, where you will automatically connect your contacts with their Facebook and/or Google+ .Q: How to determine if a particular street is either named Street or Street 13? Is there a way to test whether a given street name, any name, is either Street or Street 13? I'm writing a program and would like to be able to change the street name if it's Street 13 (it's a poor joke that I'm trying to fix). By "test" I mean trying to see if the street name matches either of those strings. A: You can use the explode function. $str = 'Street 13'; $delimiter = ';'; $array = explode($delimiter, $str); if ($array[1] == 'Street') { print $array[0]; } It will return an array like this: $array = array('Street','Street 13'); If it does not exist, or is longer than one letter, then it would return false. Edit If you want to search for "street" (since I cannot assume a consistent capitalization), then you can use: $delimiter = ';'; $array = explode($delimiter, $str); $address = $array[0]; //Street
